Nuclear Instruments and Methods in Physics Research A298 (1990) ix–xii
North-Holland

## Contents

Editorial ..... vii
Committees and Sponsors ..... viii

**Section I. Specialized software**

A new method for the calculation of magnetic fields
Kasper, E. and M. Ströer ..... 1
Simulation of the behaviour of electron-optical systems using a parallel computer
Balladore, J.-L., P.-E. Wagner, P. Spiteri and P.W. Hawkes ..... 10
Magnetic fields calculated by INTMAG compared with analytical solutions and precision measurements
Becker, R. ..... 13
Design of a $LaB_6$ gun using EGN2 and INTMAG
Becker, R. and W.B. Herrmannsfeldt ..... 22
GALOPR, a beam transport program with space charge and bunching
Bru, B. ..... 27
Numerical design of an EBIS collector to optimize electron collection and ion extraction
Dietrich, J. ..... 35
High-resolution simulation of field emission
Herrmannsfeldt, W.B., R. Becker, I. Brodie, A. Rosengreen and C.A. Spindt ..... 39
Computation of multi-lens focusing systems
Lencová, B. and M. Lenc ..... 45
Program package for the computation of lenses and deflectors
Lencová, B. and G. Wisselink ..... 56
Automation in numerical calculation of aberration properties by use of Chebyshev polynomials
Lyubchik, Ya.G., V.L. Yegorov and S.G. Narylkov ..... 67
Computer programs for the analysis of electrostatic potentials and electron trajectories
Martinez, G. and M. Sancho ..... 70
Three-dimensional modelling of various aspects of the scanning electron microscope
Rouse, J. and E. Munro ..... 78

**Section II. Accelerator optics**

Chromaticity and low-$\beta$ insertions in particle colliders
Autin, B. ..... 85
Status and future developments of the wake field transformer experiment
Weiland, T., N. Holtkamp, P. Schütt, R. Wanzenberg, W. Bialowons, M. Bieler, H.-C. Lewin and F.-J. Decker ..... 93
Normal forms and invariants in the description of a magnetic lattice
Bazzani, A., G. Servizi, E. Todesco and G. Turchetti ..... 102
Isochronous beamlines for free electron lasers
Berz, M. ..... 106
Computer simulation and experimental studies of electron beam acceleration, transport and recovery in a depressed collector
Bublik, N.P., Yu.I. Isaenkov, G.D. Kuleshov, A.L. Lisichkin, S.D. Plaksina, S.I. Molokovsky and V.F. Tregubov ..... 113

0168-9002/90/$03.50 © 1990 – Elsevier Science Publishers B.V. (North-Holland)

The optics of secondary polarized-proton beams
Carey, D.C. . . . . 117
Beam optics and dynamics of the Saclay superconducting linac booster
Cauvin, B., J.P. Fouan, J. Girard, G. Ramstein and J. Roos . . . . . 124
A new method for the simulation of synchrotron radiation in particle tracking codes
Roy, G.J. . . . . 128

**Section III. Spectrometers, energy and mass analyzers**

Recent development of ion-optical studies for mass spectrometer and mass spectrograph design
Matsuo, T., T. Sakurai and M. Ishihara . . . . . 134
Secondary electron energy analyzers for electron-beam testing
Plies, E. . . . . 142
Principles of time-of-flight mass analyzers
Wollnik, H. . . . . 156
Design of a new focused multipassage mass spectrometer
Boulanger, P. and M. Baril . . . . . 161
A compact aberration-free imaging filter with inside energy selection
Degenhardt, R. and H. Rose . . . . . 171
Ion-optical system with energy filtering for sputtering neutral and secondary ion mass spectrometers
Fishkova, T.Ya., L.P. Ovsyannikova, S.V. Pasovets and E.V. Shpak . . . . . 179
Angle, energy, and time-of-flight focusing with poloidal toroid electrostatic analyzers
Ghielmetti, A.G. and E.G. Shelley . . . . . 181
Electron-optical properties of multiple magnetic prism systems
Maňkoš, M., V. Kolařík and L.H. Veneklasen . . . . . 189
High-performance mass spectrometers of third-order focusing
Matsuda, H. . . . . 199
Beam transport optics of dipole fringe field in the framework of third-order matrix theory
Sagalovsky, L. . . . . 205
The effect of manufacturing defects on ion optical performance of toroidal sector energy analyzers
Yavor, M.I. . . . . 223
An isochronous poloidal geometry time-of-flight ion mass spectrometer for energetic space plasmas
Young, D.T. and J.A. Marshall . . . . . 227
Analysis of an imaging magnetic energy filter
Zeitler, E. . . . . 234

**Section IV. Electron and ion optics**

Ion extraction systems: optics and design
Keller, R. . . . . 247
Resolution limits in low voltage scanning electron microscopes using retarding objective lenses
Zach, J. . . . . 255
Determination of electrostatic potential in a field emission gun with the aid of a microcomputer
Balladore, J.L., P. Spiteri and M. Denizart . . . . . 260
Field evaluation from potentials calculated by the finite element method for ray tracing: the slice method
Barth, J.E., B. Lencová and G. Wisselink . . . . . 263
The magnetic parallelizer as an optical element for Auger electrons: further characterization
Bleeker, A.J. and P. Kruit . . . . . 269
Transmission characteristics of image-converter tubes
Freinkman, B.G. . . . . 279

A universal multi-charge ion source
Glukhoi, Yu.O. and S.G. Narylkov . . . . . 281
Fast computer simulation of transmission electron microscope images showing one-dimensional features and the effects of finite extent of the source on the images
Gong, H. . . . . 283
Blanking system with beam offset compensation
Grigorov, G.N. . . . . 289
The zoom afocal lens
Heddle, D.W.O. and S.M. Kay . . . . . 291
Advanced nine-point formulae for the discretization of Poisson's equation
Kasper, E. . . . . 295
Numerical analysis of trajectories and aberrations of a Wien filter including the effect of fringing fields
Kato, M. and K. Tsuno . . . . . 296
Correction of axial chromatic aberration improves the contrast transfer in bright-field phase contrast imaging
Koops, H.W.P. . . . . 321
Computer simulation of electron flow in linear-beam microwave tubes
Kumar, L. . . . . 332
Calculation of systems for focusing of hollow axially symmetric beams of charged particles
Ovsyannikova, L.P., S.V. Pasovets and E.V. Shpak . . . . . 344
Magnetic ion-optical systems with diametrical axially symmetrical fields
Sachenko, V.D. and S.M. Shimorin . . . . . 349
Fast charge-simulation procedure for planar and simple three-dimensional electrostatic fields
Schönecker, G., R. Spehr and H. Rose . . . . . 360
Engineering constraints and computer-aided optimization of electrostatic lens systems
Van der Steen, H.W.G., J.E. Barth and J.P. Adriaanse . . . . . 377
Comparison of the ion beam optics of circular and slit extraction systems
Surrey, E. and A.J.T. Holmes . . . . . 383
Pitfalls in the calculation of the field distribution of magnetic electron lenses by the finite-element method
Tahir, K. and T. Mulvey . . . . . 389
Study on discrete space charge effects in electron beams and guns
Tang, T.-T. . . . . 396
Reduction of discretisation errors in the numerical simulation of axisymmetric electrostatic problems
Thomae, H. and R. Becker . . . . . 407
Asymptotic methods applied to electrostatic field calculations for ion optical systems
Yavor, M.I. . . . . 415
Optics of conical electrostatic analysing and focusing systems
Yavor, S.Ya. and L.A. Baranova . . . . . 421

**Section V. Theoretical optics**

Arbitrary order description of arbitrary particle optical systems
Berz, M. . . . . 426
Numerical third-order transfer map for solenoid
Dragt, A.J. . . . . 441
The application of Lie algebra techniques to beam transport design
Irwin, J. . . . . 460
Computational aspects of optics design and simulation: COSY INFINITY
Berz, M. . . . . 473

Transfer matrices of electrostatic lenses and ion mirrors both consisting of rotationally symmetric electrodes
Trötscher, J., H. Irnich and H. Wollnik . . . . . 480

**Section VI. Optics for microlithography**

A new type of quadrupole correction lens for electron-beam lithography
Okayama, S. . . . . 488
Coulomb interactions in particle beams
Jansen, G.H. . . . . 496

Author Index . . . . . 505
